HORMONES 101 & CYCLE CHARTS

My cycle *reviews*

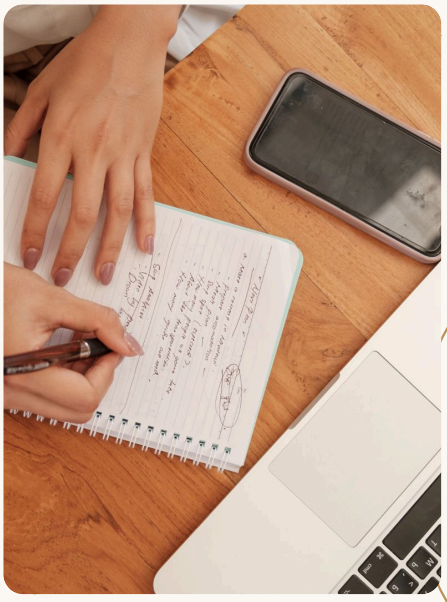

For tracking your cycle in the Read Your Body app

BY RIANNE · @THECYCLICALBODY

BEFORE YOU START

Three cycles to get to know *your own body*

These cycle reviews go with the online guide "Hormones 101 & Cycle Charts". In the guide, you'll find everything about your hormones, your body signals and what a healthy cycle looks like. You track your cycle in the Read Your Body app. Here, you look back on what you see.

Before your first cycle

- ◯ Read the guide, or at least “Your body signals”.
- ◯ Do exercises 1 and 2, before you start observing.
- ◯ Get a thermometer that shows two decimals (for example 36.48 °C).
- ◯ Install the Read Your Body app.
- ◯ Choose a fixed moment in the evening to fill in your day.
- ◯ Start on the first day of your next period. That's day 1.

How it works

Every morning, you enter your temperature in the app. Every evening, you take a minute to enter your fluid, bleeding, pain and daily signals. At the end of each cycle, you fill in the look-back page here. After three cycles, you put everything side by side.

Fill it in every day, also on days without complaints, and try not to fill in several days at once, because memory fills the gaps with expectation.

These are the basics to get to know your body. To use your body signals to avoid or plan a pregnancy, learn a full method with a certified educator (see “Want to go further?” in the guide).

These cycle reviews are for information and self-reflection. They don't give a diagnosis and don't replace medical advice.

BEFORE CYCLE 1

What I *expect*

EXERCISE 1

Which complaints do you expect, and in which week of your cycle?

How bad do you expect them to be, on a scale of 1 to 5?

How do you think your energy and mood will change over the month?

On which day of your cycle do you think you ovulate?

BEFORE CYCLE 1

What I *was taught*

EXERCISE 2

How were periods talked about at home, at school and with friends?

Which words, jokes or unwritten rules do you remember?

What did you learn about what is normal and what isn't?

What do you believe now about what your cycle does to you?

CYCLE 1

Looking back on *cycle 1*

Did you see a clear rise in your temperature? On which day?

Did your clearest fluid come before your temperature went up?

How many days were there between the rise in temperature and your next period?

In which phase did you feel most energetic, and in which phase least?

Which complaints did you have, and in which phase did they appear? How strong was your pain?

What I'd like to try next cycle:

CYCLE 2

Looking back on *cycle 2*

Did you see a clear rise in your temperature? On which day?

Did your clearest fluid come before your temperature went up?

How many days were there between the rise in temperature and your next period?

In which phase did you feel most energetic, and in which phase least?

Which complaints did you have, and in which phase did they appear? How strong was your pain?

What I'd like to try next cycle:

CYCLE 3

Looking back on *cycle 3*

Did you see a clear rise in your temperature? On which day?

Did your clearest fluid come before your temperature went up?

How many days were there between the rise in temperature and your next period?

In which phase did you feel most energetic, and in which phase least?

Which complaints did you have, and in which phase did they appear? How strong was your pain?

What I'd like to try next cycle:

AFTER THREE CYCLES

My cycle *in numbers*

Copy the numbers from your three cycles into this table, and put them next to what I look for in a healthy cycle.

	Cycle 1	Cycle 2	Cycle 3	What I look for
Cycle length (days)				25 to 35
Length of my period (days)				3 to 7
Day of my peak day				varies
Day my temperature went up				varies
Second half: temperature rise to period (days)				about 12 to 16
Spotting before my period (days)				0 to 2
Strongest cramps (0 to 5)				0 to 1
Ovulation pain (side)				

AFTER THREE CYCLES

Looking at *all three*

How many days of difference are there between your shortest and your longest cycle?

Did your peak day come before your temperature rise in every cycle?

Was the second half of your cycle about the same length each time?

Which complaints came back in all three cycles, and in which phase?

Which complaints appeared only once?

Were the cycles that felt different also different in your notes on sleep, stress, food or movement?

AFTER THREE CYCLES

What you expected, *and what you found*

Put your answers from exercise 1 next to your notes from the three cycles.

EXERCISE 4

Which complaints did you expect, and actually see in all three cycles?

Which complaints did you expect, but not see back in your notes?

Which complaints did you see that you hadn't expected?

How close was your guess about your ovulation day?

What surprised you most?

> *There are no right or wrong answers here. The aim is to see your cycle as it is for you, not as you were told it would be.*

AFTER THREE CYCLES

Patterns worth *a closer look*

A pattern that returns in all three cycles tells you much more than something you noticed once. Check what you recognized in at least two of your three cycles.

- ◯ I didn't see a clear rise in my temperature.
- ◯ The second half of my cycle, from temperature rise to period, was 10 days or shorter.
- ◯ I regularly had spotting for more than two days before my period.
- ◯ My cycle length varied a lot from cycle to cycle.
- ◯ I couldn't find a clear pattern in my cervical fluid.
- ◯ My cramps were 3 or higher, or got in the way of my day.
- ◯ The same complaints came back every cycle and got in the way of my daily life.

If you checked one or more of these, it's worth looking at more closely. These patterns are often linked to things you can work on, such as stress, sleep or how much you eat in relation to how much you move. They're also exactly what I look at with clients.

Did you notice one of the signals from “When to see your doctor” in the guide? Then please make an appointment with your doctor first.

YOUR NEXT STEP

Want help *reading your charts?*

Bring your charts. You now have three cycles of your own body in the app. If you'd like help reading them, export your charts from the app and bring them to a free discovery call. We'll look at your charts together, and at whether 1:1 coaching is the right fit for you.

Schedule a free discovery call

The discovery call is free and always available. 1:1 coaching has only 4 spots open per month.
